Checkpoint 5 Jacco 16-12-2022

**Munteanu, Dragos D.A.** 7 minutes ago

I have had a talk with Jacco about the status of my project, about receiving feedback and some tips about implementing roles in my application (authorization). We both agreed that the current status of my project (at the time) was behind, and that I had to work a lot in order to get back on track. Jacco told me that feedback is not just about the feedback itself, but also letting the teachers know the current status of your project, which I didn't think about at the time being, since I knew that what was important was to hand in everything at the last sprint. I ended up implementing the authorization like in the example from Fontys.

Describe what goes well according to your teacher, what you should pay more attention to and what is your next step to achieve the learning outcomes...

Post Feedback

Checkpoint 4 Jacco 04-10-2022

**Munteanu, Dragos D.A.** 3 months ago

I have shown my project plan to Jacco for feedback because I have uploaded a broken file for the first sprint, so he could not review it from Canvas, and the tip I received for improving my user stories is to create another tab with story points. He also mentioned that he will review my project plan in more detail which is accessible in my GitLab repository. I have also asked about JPA repositories, which Jacco said that I should wait on because we will discuss it in class, and also about sending data from child to parent components in react, which I got the answer to.

Checkpoint 3 Jacco 27-09-2022

⚠ No feedback submitted.

Checkpoint 2 Ali 15-09-2022**Munteanu, Dragos D.A.** 4 months ago

I have had a personal talk with Ali about how the first weeks have been. Having transferred from another university, it took me about two to three weeks to get used to how the system works in this new environment, how grading is given, how lectures work and getting to know my colleagues. After forming groups for the project, me and my group have gotten acquainted quite quickly and formed a good environment to start working. I have also managed to keep in track with the first sprint for the personal project, having done the required tasks, but I am waiting for feedback on it to know where I could improve.

Checkpoint 1 Maja 09-09-2022**Munteanu, Dragos D.A.** 4 months ago

I have presented to Maja my idea for the personal project, that being a food delivery site. My ideas for the site are that there will be: users, which can place orders, choose extras, see order information, check order history and retrieve specific info about an order, admins, which can approve restaurants that want to join the platform and remove users and restaurants if it's necessary, restaurants, that can request to join the platform if they meet the requirements and have special accounts that will give them access to modifying items and prices, and drivers that can enroll on the site if there are free spots. Maja told me that the project is sufficient, but also that it could be quite big, so I should have the drivers as a could have. She has also told me useful information about making the project plan, meaning how to make user stories, what the estimation refers to and acceptance criteria. She has also helped me by showing me how to get to the university's GitLab link and how to add members.
